SUMMARY

Aspiring Cloud & DevOps Engineer with hands-on experience across AWS, Docker, Kubernetes, and CI/CD pipelines. Skilled in infrastructure automation, with a track record of shipping production pipelines, executing zero-downtime migrations, and debugging real GitOps failures end-to-end.

EDUCATION

SG Balekundri Institute of Technology

2022 – 2026

BTech in Computer Science and Engineering, CGPA: 7.68 — Belagavi, India

WORK EXPERIENCE

Softmusk Info Pvt. Ltd.

Jan – May 2026

Cloud DevOps Intern

- Deployed and maintained containerized services on AWS EC2 using Docker, GitLab CI/CD, and Nginx.
- Configured Nginx reverse proxying and Cloudflare SSL for production traffic, partnering with the engineering team on deployment tasks.

Internship Studio

Jun – Aug 2026

AWS Intern

- Worked hands-on with core AWS services (EC2, S3, IAM, VPC) to configure cloud infrastructure fundamentals.

TECHNICAL SKILLS

Programming Languages: Python, C, SQL

Cloud: AWS (EC2, S3, IAM, VPC), Backblaze B2 / S3-compatible storage, Cloudflare (DNS, SSL)

DevOps & Automation: Docker, Kubernetes, ArgoCD, GitHub Actions, Kustomize, GitLab CI/CD, Terraform, Prometheus/Grafana

Web Technologies: HTML, CSS, Node.js, Express.js

Tools: Git, GitHub, Linux, Nginx, VS Code

PROJECTS

Automated Web App Deployment Pipeline | AWS, Docker, GitLab CI/CD, Nginx | [GitHub](#)

- Built a production CI/CD pipeline for a Vite-based web app, cutting build-to-deploy time to under 90 seconds with zero queue delay.
- Containerized the app with Docker and deployed it on AWS EC2, configuring Nginx as a reverse proxy for live traffic on a public domain.
- Replaced manual release steps with an automated GitLab CI/CD workflow, enabling repeatable, on-demand production deployments.

K8s GitOps Pipeline | Kubernetes, ArgoCD, GitHub Actions, Kustomize, Prometheus/Grafana | [GitHub](#)

- Built an end-to-end GitOps pipeline on a local Kind cluster with zero manual kubectl: GitHub Actions builds and pushes Docker images on every push to main, and ArgoCD auto-syncs staging while production requires manual promotion.
- Split staging/prod configs with Kustomize overlays, wired Prometheus/Grafana for live request-rate and latency monitoring via ServiceMonitor, and hardened containers to run as non-root with an explicit UID.

File Vault — Self-Hosted File Storage Platform | Node.js, Express, Backblaze B2, Render, Cloudflare | [Github](#)

- Built and deployed a full-stack file storage app with zero local-disk storage, using Backblaze B2 (S3-compatible object storage) for a stateless, ephemeral-host-friendly architecture.
- Executed a zero-downtime production migration for a breaking data schema change: stood up a parallel staging environment on Render, wrote a custom migration script, validated end-to-end, then performed a live DNS cutover via Cloudflare.
- Hardened the app for production with CSRF protection, rate-limited authentication, secure session handling, and fail-fast startup validation for missing secrets.

CERTIFICATIONS

- [AWS Cloud Practitioner Essentials](#) — AWS Training & Certification (May 2026)
- [AI – DevOps Engineer Foundation Course](#) — Reliance Foundation Skilling Academy (May 2026)
- [AWS Internship](#) — Certificate of Training & Certificate of Internship, Internship Studio (ID: ISAWST3339751 / ISAWSI3339751)
